BACKGROUND OF INVENTION

1. Field of the Invention

[002] The present invention relates generally to a system and method for browsing computer networks such as the World Wide Web ("Web"). More specifically, the present invention relates to a system and method for displaying a selected portion of a first computer display on the display of one or more second computers through a collaborative Web browsing session.

2. Related Art

[003] The Internet is comprised of a vast number of world-wide interconnected computers and computer networks. These interconnected computers exchange information using various services such as electronic mail ("email"), Gopher, telnet, file transfer protocol ("FTP"), and the Web. The Web allows a computer that is connected to the Internet to access data that is stored on other interconnected computers. The data
